

IN THE CLAIMS

Claims 1-31 (Canceled).

32 (Previously Presented). An electrical device comprising:
a selectively variable impedance; and
a control to change the impedance of said selectively variable impedance in response to an input command on an audio cassette player.

33 (Previously Presented). The device of claim 32 wherein said device is in the form of a cassette tape.

34 (Currently Amended). The device of claim 32 wherein said device includes a sensor to sense an operation of the ~~a~~ cassette player and to provide said information to said control to control the impedance of said selectively variable impedance.

35 (Previously Presented). A method comprising:
varying the impedance of a selectively variable impedance in a first device to develop a signal for a remote second device.

36 (Previously Presented). The method of claim 35 including receiving a cassette player command and translating said command by varying the impedance of said selectively variable impedance.

37 (Previously Presented). The method of claim 35 including varying said impedance to enable cassette player commands to control a remote device in the form of a digital audio player.
